Profile

Entry-level Frontend Developer currently completing a Software Development programme at Uncommon.org, with hands-on frontend learning and practical web development experience. Developing skills in HTML, CSS, JavaScript and React (JSX/TSX), with a focus on responsive, accessible and user-friendly web experiences. Familiar with Git and basic version control. A dependable and motivated learner seeking an internship or junior developer opportunity to apply technical skills, contribute to real-world projects and continue growing within a technology team.

Professional Experience

Coding Volunteer, *Uncommon.org*

01/2026 – Present

- Supported young learners with basic technology and digital learning activities.
- Assisted participants in understanding introductory coding and problem-solving concepts.
- Encouraged young learners to explore technology through practical and creative activities.
- Provided guidance and support during learning activities and exercises.
- Worked collaboratively with other volunteers to create a positive and supportive learning environment.
- Developed communication, teamwork, patience and problem-solving skills through volunteer engagement.

Education

Software Development Programme, *Uncommon.org*

- Software development fundamentals
- Frontend technologies
- Practical web development

Technical Skills

- | | |
|-------------------------|---------------------------------|

| • Attention to Detail | • JavaScript Fundamentals |
| • Git & Version Control | • Communication & Collaboration |
| • React (JSX & TSX) | • Web Development Fundamentals |
| • Responsive Web Design | • Problem Solving |

Project & Practical Experience

Travel Journal Web Application [↗](#), *HTML5 | CSS3 | JavaScript | LocalStorage*

01/2026 – Present
Harare

- Developed a responsive Travel Journal web application that enables users to create, organize and revisit personal travel experiences in one centralized platform.
- Implemented full journal-entry management, including creating, editing and deleting travel entries.
- Developed functionality for adding travel photos, destinations and travel dates, allowing users to organize their experiences effectively.
- Built favorites, travel statistics and a journey gallery to enhance content organization and user engagement.
- Implemented search and filtering functionality using JavaScript to help users quickly locate journal entries.
- Developed responsive navigation and dark mode to improve usability and provide a flexible user experience.
- Used JavaScript DOM manipulation and form handling to create dynamic interactions and manage user input.
- Implemented LocalStorage to persist journal data, allowing users to retain their entries after refreshing the browser.
- Applied Flexbox and CSS Grid to create responsive layouts optimized for different screen sizes and devices.
- Demonstrated practical application of frontend development, responsive UI design, JavaScript functionality, DOM manipulation and client-side data persistence.

Portfolio outcome: Delivered a functional, mobile-responsive frontend application demonstrating the ability to translate a real-world user need into an interactive web solution.

Business Tracker [↗](#), *React | JavaScript | Supabase | CSS*

01/2026 – Present

- Developed a business tracking application designed to help small and informal businesses manage credit sales, customer debts and payment activity.
- Built functionality for recording and monitoring customer credit and outstanding balances, helping merchants maintain organized payment records.
- Implemented payment due-date tracking and customer payment monitoring to improve visibility over outstanding obligations.
- Developed automated WhatsApp payment reminders to support timely customer follow-ups and reduce reliance on manual reminders.
- Added support for USD and local currency transactions, enabling businesses to record different types of transactions within the system.
- Created a business and cash-flow overview to provide merchants with greater visibility into outstanding payments and business finances.
- Used React and JavaScript to develop the interactive application interface and implement application functionality.
- Used Supabase for application data management and persistence.
- Applied CSS and responsive design principles to create a practical and accessible interface for different screen sizes.
- Designed the solution around a real-world business challenge, replacing fragmented records such as notebooks and WhatsApp messages with a centralized digital tracking system.

Outcome: Developed a practical business management solution that improves visibility of outstanding payments and cash flow, supporting more informed stock and supplier management.
